D. Langkah Kerja Praktikum

Langkah 1 - Pengecekan Lingkungan

1. Buka terminal / command prompt.
2. Jalankan perintah berikut:
3. node -v
4. npm -v
5. Git -V

```
PS D:\2026-Ganjil> cd PemogramanFramework
PS D:\2026-Ganjil\PemogramanFramework> cd Code
PS D:\2026-Ganjil\PemogramanFramework\Code> node -v v20.11.1
● PS D:\2026-Ganjil\PemogramanFramework\Code> npm -v
  10.2.4
● PS D:\2026-Ganjil\PemogramanFramework\Code> git -v
  git version 2.52.0.windows.1
```

Langkah 2 – Membuat Project Next.js

1. Buat direktori baru dan masuk ke direktori kerja

```
● PS D:\2026-Ganjil\PemogramanFramework\Code> mkdir praktikum

Directory: D:\2026-Ganjil\PemogramanFramework\Code

Mode                LastWriteTime         Length N
a
m
e
-----
d----- 17/02/2026      00.01  p
r
a
k
t
i
k
u
m
```

2. Jalankan perintah:

```
PS D:\2026-Ganjil\PemogramanFramework\Code\praktikum> npx create-next-app@13.4.7

Installing dependencies:
- react
- react-dom
- next
- typescript
- @types/react
- @types/node
- @types/react-dom
- eslint
- eslint-config-next

added 338 packages, and audited 339 packages in 2m

136 packages are looking for funding
  run `npm fund` for details

found 0 vulnerabilities
Initialized a git repository.

Success! Created my-app at D:\2026-Ganjil\PemogramanFramework\Code\praktikum\my-app

A new version of `create-next-app` is available!
You can update by running: npm i -g create-next-app

npm notice
npm notice New major version of npm available! 10.2.4 -> 11.10.0
npm notice Changelog: https://github.com/npm/cli/releases/tag/v11.10.0
npm notice Run npm install -g npm@11.10.0 to update!
npm notice
```

3. Kita menggunakan versi 13.4.7 bukan yang latest (npx create-next-app@latest nextjs-pagesrouter) dan Tunggu hingga proses instalasi selesai.
4. Masuk ke folder projectnya

```
● PS D:\2026-Ganjil\PemogramanFramework\Code\praktikum> cd .\my-app\
○ PS D:\2026-Ganjil\PemogramanFramework\Code\praktikum\my-app> []
```

Langkah 3 – Menjalankan Server Development

1. Masuk ke folder project:

```
● PS D:\2026-Ganjil\PemogramanFramework\Code\praktikum> cd .\my-app\
○ PS D:\2026-Ganjil\PemogramanFramework\Code\praktikum\my-app> []
```

2. Jalankan aplikasi:

```
npm run dev
```

```
PS D:\2026-Ganjil\PemogramanFramework\Code\praktikum\my-app> npm run dev

> my-app@0.1.0 dev
> next dev

▲ Next.js 16.1.6 (Turbopack)
- Local:          http://localhost:3000
- Network:        http://192.168.80.1:3000

✓ Starting...
Attention: Next.js now collects completely anonymous telemetry regarding usage.
This information is used to shape Next.js' roadmap and prioritize features.
You can learn more, including how to opt-out if you'd not like to participate in this anonymous program, by visiting the following URL:
https://nextjs.org/telemetry

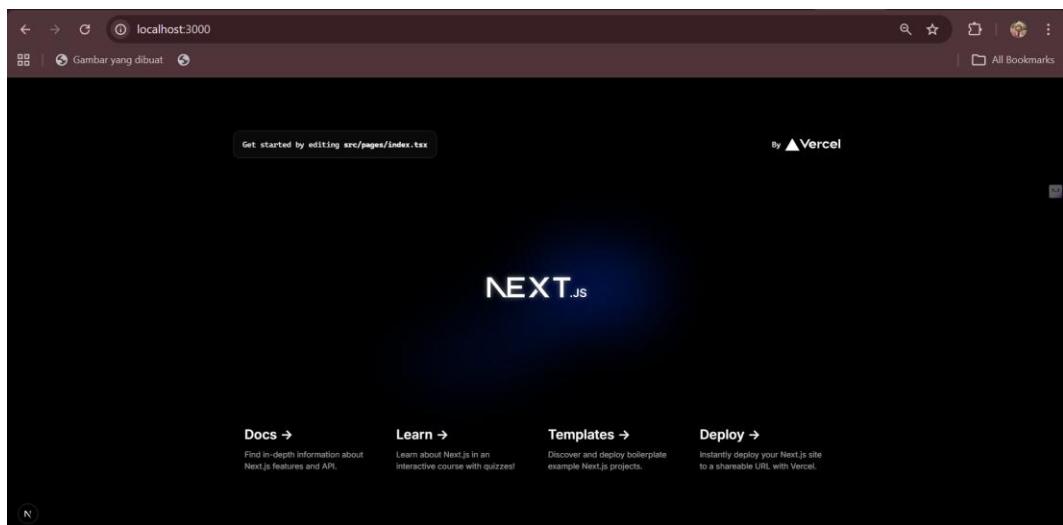

We detected TypeScript in your project and reconfigured your tsconfig.json file for you.

The following mandatory changes were made to your tsconfig.json:

  - jsx was set to react-jsx (next.js uses the React automatic runtime)

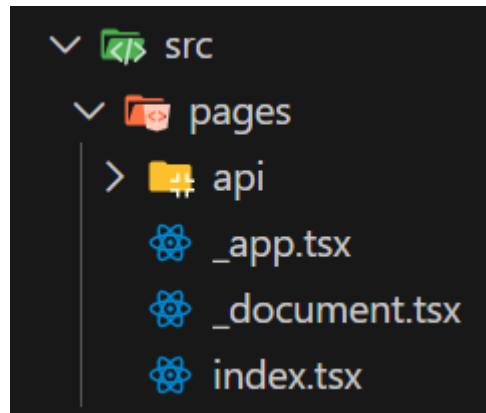

✓ Ready in 712ms
```

3. Buka browser dan akses: <http://localhost:3000>

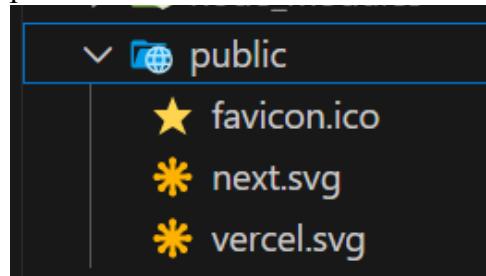

Langkah 4 – Mengenal Struktur Folder

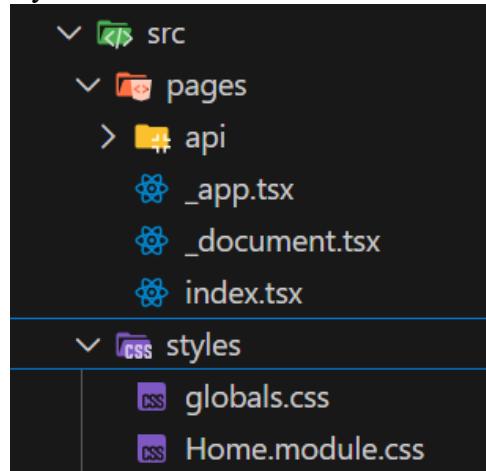

- Amati folder utama:
 - pages/ → tempat routing halaman

- public/ → asset static

- styles/ → file CSS

- package.json → konfigurasi project

```
● ● ●
1  {
2    "name": "my-app",
3    "version": "0.1.0",
4    "private": true,
5    "scripts": {
6      "dev": "next dev",
7      "build": "next build",
8      "start": "next start",
9      "lint": "next lint"
10    },
11   "dependencies": {
12     "@types/node": "25.2.3",
13     "@types/react": "19.2.14",
14     "@types/react-dom": "19.2.3",
15     "eslint": "9.39.2",
16     "eslint-config-next": "16.1.6",
17     "next": "16.1.6",
18     "react": "19.2.4",
19     "react-dom": "19.2.4",
20     "typescript": "5.9.3"
21   }
22 }
23
```

- gitIgnore -> file konfigurasi di Git yang berfungsi untuk memberitahu Git file atau folder apa saja yang TIDAK perlu di-track / di-commit ke repository.

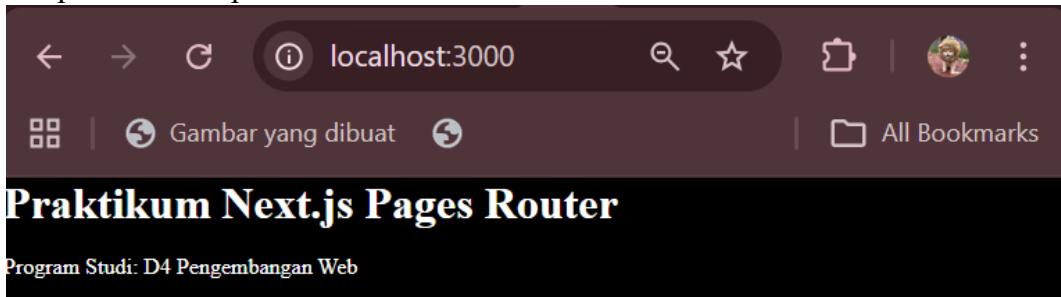

```
● ● ●
1  # See https://help.github.com/articles/ignoring-files/ for more about ignoring files.
2
3  # dependencies
4  /node_modules
5  /.pnp
6  .pnp.js
7
8  # testing
9  /coverage
10
11 # next.js
12 /.next/
13 /out/
14
15 # production
16 /build
17
18 # misc
19 .DS_Store
20 *.pem
21

24 yarn-debug.log*
25 yarn-error.log*
26
27 # local env files
28 .env*.local
29
30 # vercel
31 .vercel
32
33 # typescript
34 *.tsbuildinfo
35 next-env.d.ts
36
```

Langkah 5 – Modifikasi Halaman Utama

1. Buka file:
2. pages/index.js
3. Ubah isi halaman, misalnya:

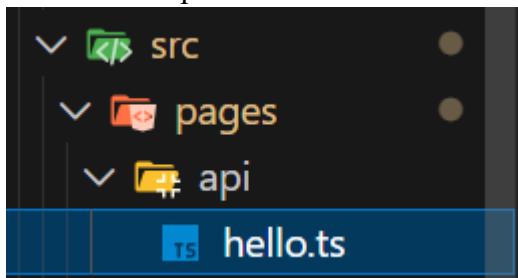

```
index.tsx M X
gramanFramework > Code > praktikum > my-app > src > pages > index.tsx >
1  export default function Home() {
2    return (
3      <div>
4        <h1>Praktikum Next.js Pages Router</h1> <br> </
5          <p>Program Studi: D4 Pengembangan Web</p>
6        </div>
7      );
8    }
9
```

4. Simpan dan lihat perubahan di browser

Langkah 6 – Modifikasi API

1. Buka folder api

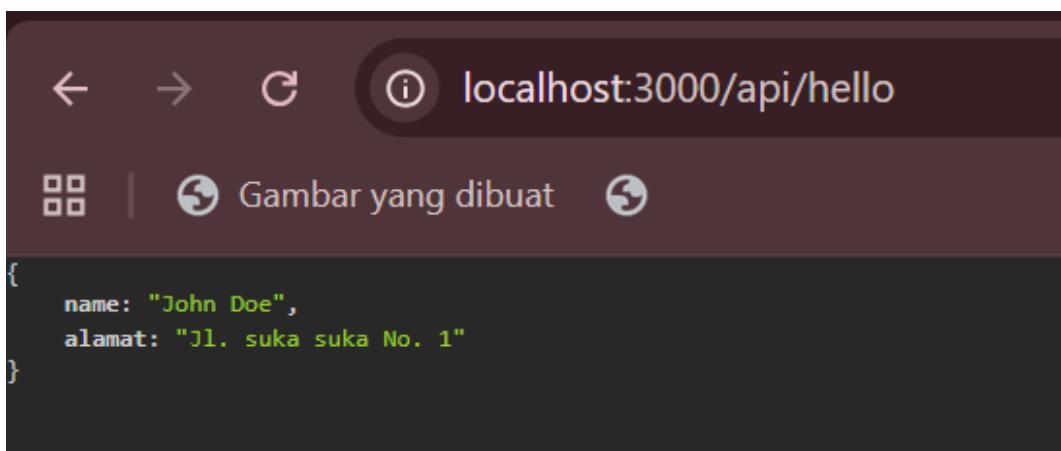

2. Modifikasi hello.ts

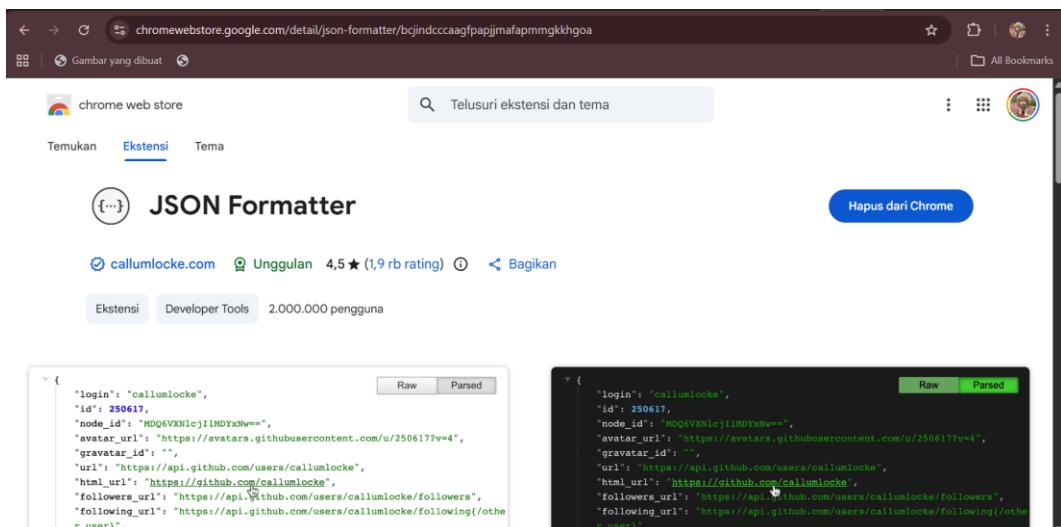

```
1 // Next.js API route support: https://nextjs.org/docs/api-routes/introduction
2 import type { NextApiRequest, NextApiResponse } from 'next'
3
4 type Data = {
5   name: string
6   alamat: string
7 }
8
9 export default function handler(
10   req: NextApiRequest,
11   res: NextApiResponse<Data>
12 ) {
13   res.status(200).json({ name: 'John Doe', alamat: 'Jl. suka suka No. 1' })
14 }
15
```

3. Jalankan browser dengan Alamat <http://localhost:3000/api/hello>

4. Tambahkan extensions chrome

5. Jalankan browser chrome

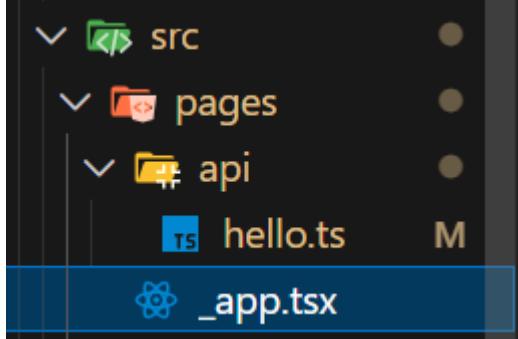

A screenshot of a web browser window. The address bar shows 'localhost:3000/api/hello'. The main content area displays a JSON object:

```
{ "name": "John Doe", "alamat": "Jl. suka suka No. 1" }
```

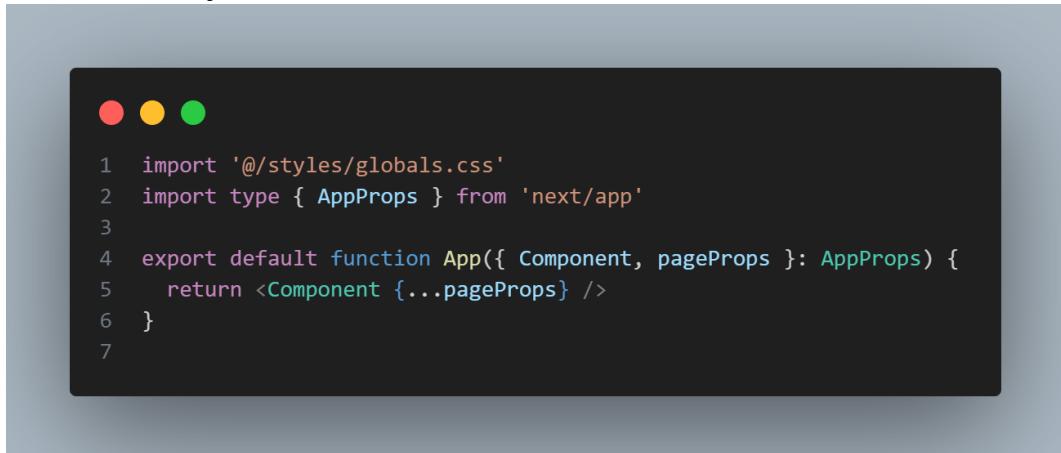

At the bottom right of the browser window, there are 'Raw' and 'Parsed' buttons.

Langkah 7 – Modifikasi Background

1. Buka file _app.tsx

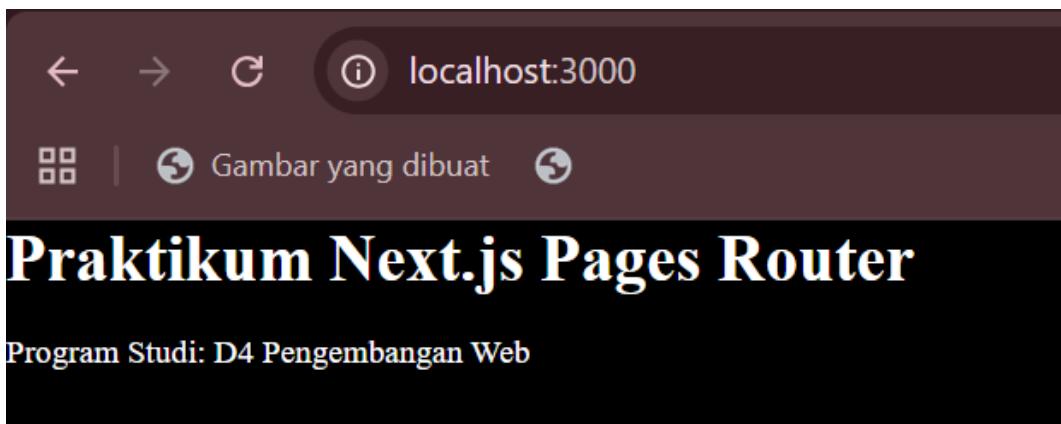

2. Modifikasi menjadi berikut

```
1 import '@/styles/globals.css'
2 import type { AppProps } from 'next/app'
3
4 export default function App({ Component, pageProps }: AppProps) {
5   return <Component {...pageProps} />
6 }
7
```

3. Jalankan localhost

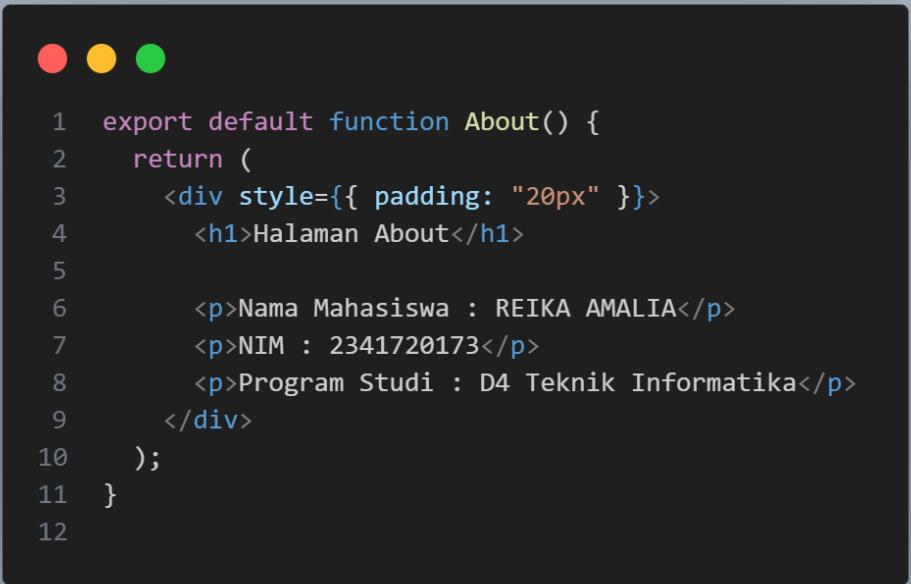

A screenshot of a browser window. The address bar shows 'localhost:3000'. The main content area displays the text 'Praktikum Next.js Pages Router' and 'Program Studi: D4 Pengembangan Web'.

1. Tugas Praktikum

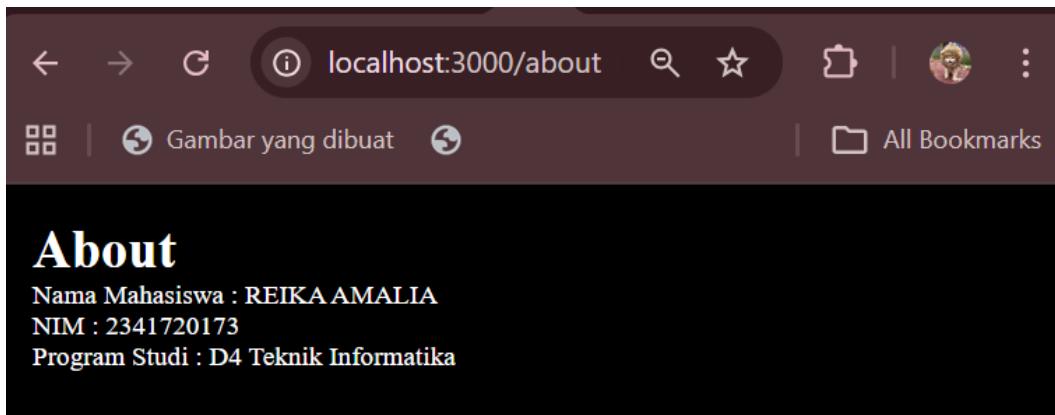

Tugas 1 (Wajib)

- Buat halaman baru about.js di folder pages.

- Tampilkan:
 - o Nama Mahasiswa
 - o NIM
 - o Program Studi

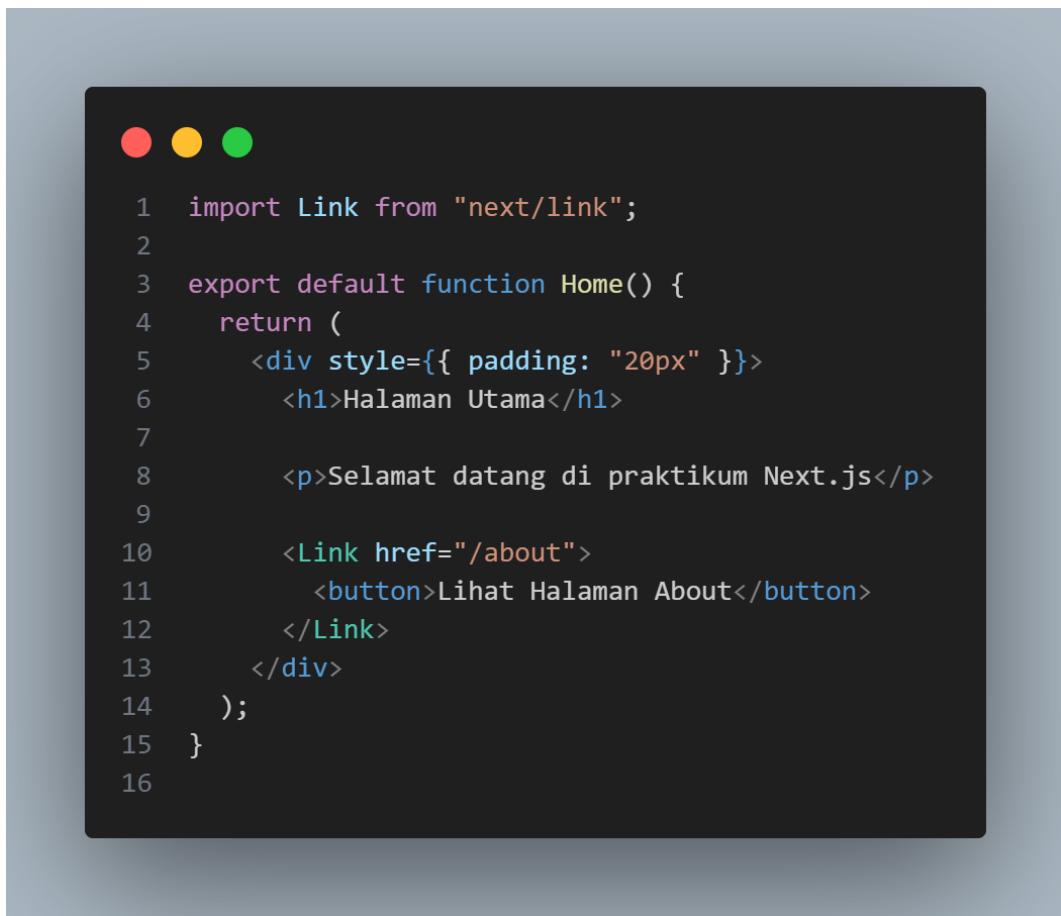

```
1  export default function About() {
2      return (
3          <div style={{ padding: "20px" }}>
4              <h1>Halaman About</h1>
5
6              <p>Nama Mahasiswa : REIKA AMALIA</p>
7              <p>NIM : 2341720173</p>
8              <p>Program Studi : D4 Teknik Informatika</p>
9          </div>
10     );
11 }
12
```

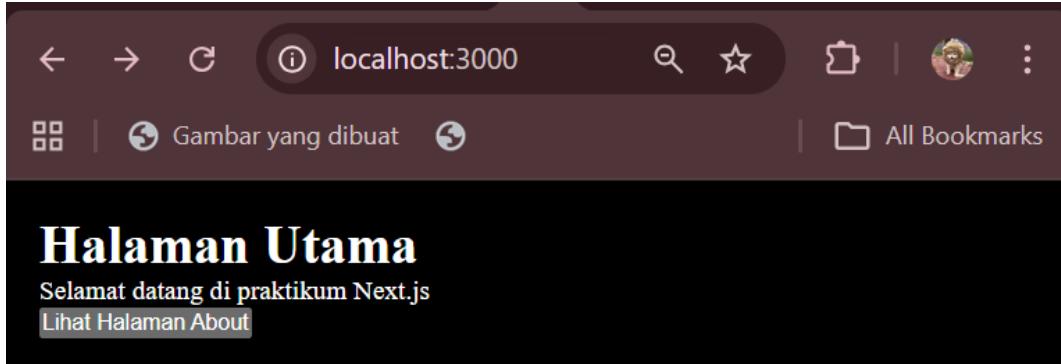

Tugas 2 (Pengayaan)

- Tambahkan minimal 1 link navigasi dari halaman utama ke halaman about.

A screenshot of a code editor displaying a file named Home.js. The code is written in JSX and defines a component that returns a div with padding, an h1 heading 'Halaman Utama', a paragraph 'Selamat datang di praktikum Next.js', and a link to '/about' labeled 'Lihat Halaman About'. The code is numbered from 1 to 16.

```
1 import Link from "next/link";
2
3 export default function Home() {
4     return (
5         <div style={{ padding: "20px" }}>
6             <h1>Halaman Utama</h1>
7
8             <p>Selamat datang di praktikum Next.js</p>
9
10            <Link href="/about">
11                <button>Lihat Halaman About</button>
12            </Link>
13        </div>
14    );
15 }
16
```

F. Pertanyaan Refleksi

- 1) Mengapa Pages Router disebut sebagai routing berbasis file?
 - Karena di Next.js kita tidak bikin routing manual seperti pakai react-router. Cukup buat file di folder pages, otomatis jadi alamat URL. Misal pages/about.tsx langsung bisa diakses ke /about. Jadi struktur folder = struktur halaman web.
- 2) Apa perbedaan Next.js dengan React standar (CRA)?
 - Kalau React biasa (Create React App) kita harus pasang banyak library sendiri, misalnya routing, SEO, optimasi, dll. Sedangkan Next.js sudah nyediain bawaan seperti routing otomatis, server-side rendering, dan performa lebih bagus. Next.js itu React yang sudah “siap pakai” buat web production.
- 3) Apa fungsi perintah npm run dev?

- Untuk menjalankan project dalam mode development. Jadi kita bisa lihat website di localhost, dan setiap ada perubahan kode langsung update otomatis tanpa perlu refresh manual.
- 4) Apa perbedaan npm run dev dan run build ?
- npm run dev dipakai saat ngoding (masih proses bikin, ada hot reload).
 - npm run build dipakai kalau project sudah selesai dan mau disiapkan ke versi production supaya lebih cepat dan optimal.
